DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11 April 2007 has been entered.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 26 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The scope of claim 26 is indefinite because it is improperly dependent upon withdrawn claims.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3671

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1 through 4, 12, 14 through 16 and 26 through 28 are rejected under 35

U.S.C. 102(b) as being anticipated by Jackson (U.S. Patent No. 4,377,123).

Jackson '123, as best seen in Figure 1, shows a motion reduction apparatus for a floating body comprising:

a plumb plate (13) which is provided on at least a side of a floating main body (10), is separated from the floating main body a specific distance, extends in a vertical plane with respect to the floating main body in an upright orientation, and extends below a lowermost bottom surface of the floating main body;

wherein the plumb plate is supported at a specific location of the floating main body by a plurality of stay members (14, 15 and 21) arranged on the floating main body so as to provide flow sections that are surrounded by the floating main body, the plumb plate, and the stay members;

wherein the plumb plate is constructed to swing (via element 16) with respect to the floating main body;

wherein the plate has an edge section closest to the floating main body that is separated from the floating main body by a specific distance, and an upper edge of the plate member is oriented at substantially a same level as a lowermost bottom surface of the floating main body.

Conclusion
